

KARTHIK N

LEAD ENGINEER

 Karnataka, India

 knprince95@gmail.com

 +91 9110430116

Professional Summary

- Lead Engineer with 8+ years of experience building scalable, high-performance enterprise web applications, with strong expertise in React, Angular, TypeScript, and modern frontend architecture.
- 7+ years of React experience with hands-on expertise in React, TypeScript, Fluent UI, PCF, Power Platform, Dynamics 365, Dataverse, and Xrm APIs for enterprise CRM solutions.
- 3+ years of Angular experience, working with Angular 12–21, Nx, RxJS, NgRx, Signals, Angular Material, AG Grid, SCSS, Tailwind CSS, SSR, and Incremental Hydration.
- Good backend experience with Java, .NET 8, C#, ASP.NET Core REST APIs, IHttpConnectionFactory, and CMS/third-party API integrations.
- Hands-on experience with Azure cloud and DevOps technologies, including Azure DevOps, Docker, ACR, AKS, Azure Front Door, WAF, Private Link, Azure Storage, Cosmos DB, and Bicep infrastructure as code.
- Experienced in designing Nx monorepo and multi-application architectures, developing reusable libraries, shared design systems, modular components, role-based access, dynamic routing, server-side data processing, and scalable application structures.
- Strong experience in API integration, CMS-driven applications, GraphQL, REST APIs, authentication, caching, pagination, error handling, automated testing, and CI/CD pipelines across enterprise applications.
- Hands-on experience with AI-assisted development using Devin and Windsurf, leveraging AI for code generation, feature development, refactoring, debugging, testing, documentation, and understanding complex codebases while validating generated solutions.
- Proven ability to lead technical development, estimate and execute development activities, analyze risks, troubleshoot complex issues, and deliver maintainable solutions across multiple applications and environments.
- Strong communicator and collaborative technical contributor with the ability to adapt quickly to new technologies, drive engineering improvements, and work effectively with cross-functional and client-facing teams.

Technical Skills

➤ Libraries & Frameworks

- React, Angular.
- Nx, RxJS, NgRx, Redux, Recoil, MobX, Angular Signals
- Angular Material, MUI, Bootstrap, Fluent UI, Tailwind CSS, SASS/SCSS
- AG Grid, Power Platform CLI, PCF, Dynamics 365, Dataverse, Xrm APIs

➤ Client Side

- HTML5, CSS3, JavaScript, TypeScript, Responsive UI/UX
- REST API & GraphQL integrations, API data handling, dynamic forms and components
- Performance Optimization, SSR, Incremental Hydration, Client-side caching
- Reusable Components, Design Systems, Accessibility, Cross-browser Compatibility

➤ Server Side

- Java, C#, .NET 8, ASP.NET Core, BFF
- GraphQL, REST APIs, GraphQL.Client, HttpClientFactory
- Dropwizard, CMS & Third-party API Integrations
- MongoDB, Firebase, Azure Cosmos DB

➤ Tools and Platform

- Microsoft Dynamics 365, Power Platform CLI,
- Kontent.ai, Builder.io, Azure
- Devin, Windsurf – AI-assisted Development

Experience Summary

Ascendion Engineering Private Limited

Lead Engineer | June 2023 – Current Date

Projects/ Clients	LoanDepot
Tech Stack	• React, Angular, TypeScript, RxJS, Fluent UI, Power Platform CLI (PAC), PCF, Dynamics 365, Dataverse, .NET 8, C#, ASP.NET Core, GraphQL, REST APIs, Kontent.ai (CMS), Azure, Azure DevOps, Docker, AKS, Bicep, Azure Front Door, Cosmos DB, Devin, Windsurf.

Responsibilities & Contributions	▪ Developed custom UI controls and reusable components using React, TypeScript, Fluent UI, and Xrm APIs; developed features for customer communication, notifications, calling/messaging workflows, dashboards, forms, and CRM data interactions. ▪ Packaged and deployed PCF controls as Power Platform solutions for model-driven applications, managing Dataverse configurations and supporting deployments across multiple environments. ▪ Developed and maintained Angular applications across versions 12–21, using Nx monorepo, TypeScript, RxJS, Angular Material, AG Grid, NgRx, Signals, SCSS, Bootstrap, and Tailwind CSS; migrated legacy applications to modern Angular architecture and created reusable libraries, components, services, forms, filters, and shared UI functionality. ▪ Implemented multi-application Angular/Nx solutions by migrating multiple standalone applications into a unified monorepo with shared feature, UI, data-access, service, utility, and theme libraries; implemented clean dependency boundaries, reusable design-system components, role-based routing, dynamic filtering, server-side pagination/sorting, grid functionality, file uploads, and Excel export. ▪ Implemented modern Angular SSR, Incremental Hydration, Signals, computed/linkedSignal, httpResource/rxResource, OnPush change detection, event replay, and HTTP transfer caching, along with CMS-driven dynamic routing and reusable component registries to improve application performance, scalability, maintainability, and Core Web Vitals. ▪ Developed enterprise backend services using .NET 8, C#, ASP.NET Core, strongly typed DTOs; implemented CMS and third-party API integrations with authentication, pagination, filtering, caching, retry policies, timeout handling, structured logging, and robust error/fallback handling. ▪ Leveraged AI-assisted development tools including Devin and Windsurf for code generation, feature development, refactoring, debugging, testing, and documentation across React, Angular, and .NET/C# applications, using AI workflows to understand existing codebases, accelerate implementation, and improve developer productivity while reviewing and validating generated code. ▪ Migrated multiple consumer-facing sites from legacy Azure CDN to Azure Front Door Premium, implementing reusable Bicep templates for Front Door endpoints, origin groups, routes, custom domains, and
---	---

multi-environment deployments across dev, QA, staging, and production.

InfoStretch Corporation India Pvt. Ltd. (Apexon)

Senior Software Developer | November 2021 to April 2023 (1.6years)

Projects / Clients	White Space Health, HIMSS, Virtual Card - RPM
Tech Stack	Front End: React, Javascript, Typescript, Redux, Recoil, Mobx, MUI, Shopify, Jest, Amazon-chime-sdkjs, AWS-amplify.
Responsibilities & Contributions	- Implemented state management using Redux, Recoil, and MobX to manage complex application state, asynchronous workflows, and data synchronization across reusable React components. - Built responsive and user-friendly interfaces using MUI, implementing reusable UI components, forms, layouts, validations, and consistent styling across application modules. - Integrated Shopify functionality into React applications, working with frontend components and application workflows to deliver seamless e-commerce experiences. - Implemented real-time communication and collaboration features using Amazon Chime SDK JS, integrating audio/video communication capabilities into React-based applications. - Integrated AWS Amplify for frontend cloud capabilities and application services, supporting secure and scalable React application development. - Developed and maintained Jest unit tests for React components, state management, utilities, and application logic to improve code quality, reliability, and maintainability.

Hebbale Labs Pvt. Ltd

Software Developer (Full Stack) | May 2018 to October 2021 (3.6 years)

Projects / Clients	TalFinder(Product), YellowTin, CureTech, GoodResearch
Tech Stack	- Front End: React, Redux, Javascript, Typescript, SVG.js - Backend: Java, Dropwizard

Responsibilities & Contributions

- Developed and integrated REST API services using Java and Dropwizard to support frontend user interface interactions, implementing request handling, business logic, data processing, validation, and API response management.
- Implemented complex business logic and data-driven workflows based on client requirements and user inputs, using Java, Dropwizard, JavaScript, and TypeScript to deliver reliable and maintainable application functionality.
- Developed interactive and responsive web applications using React, Redux, JavaScript, and TypeScript, implementing reusable components, centralized state management, API integrations, and dynamic UI workflows.
- Built data visualizations and interactive graphical elements using SVG.js, integrating dynamic client data into responsive visual interfaces and user interactions.
- Collaborated with team members on the design, development, integration, debugging, and delivery of complex web applications, providing technical guidance and ensuring consistency with established coding standards.
- Worked directly with clients and stakeholders to understand new requirements, clarify technical dependencies, analyze complexity, and provide development estimates and implementation approaches.
- Successfully delivered assigned features and project milestones within agreed timelines without client escalations, while maintaining code quality, functionality, and adherence to development standards.
- Rebuilt and migrated an existing iOS application into a web-based application using React, Redux, and TypeScript, translating existing application workflows and business requirements into reusable web components and responsive user interfaces.
- Ensured adherence to coding standards, reusable component practices, maintainable architecture, and development best practices across React frontend and Java/Dropwizard backend implementations.

Qualification

- ✓ Bachelor of Engineering in ECE from Vivekanand Institute of Technology Bangalore in 2017.

Personal Dossier

- **Father Name:** Nagesh Babu Acharya
- **DOB:** 23rd April 1995
- **Passport No:** R292733
- **Languages:** English, Hindi, Kannada
